

## HLP130 - Jacket Construction

**The HLP130 is a crane specifically designed with all elements of Offshore Energy in mind.**

HLP engineers provide simple and clear solutions to our clients needs. Our team can help you turn any quayside into a highly efficient assembly/construction campaign.

The HLP130 enables multiple fixed foundation jacket structures to be assembled, simultaneously. With the cranes comparatively smaller footprint this innovation frees up critical space on site for easier access.
