

## HLP130 - Jacket Handling

92m jacket  
height

3000t  
in Weight

42m  
Lift Radius

**Seeking Optimal Efficiency, Offshore wind components are getting bigger, heavier and taller. HLP are adapting to ensure these huge components are handled efficiently.**

The HLP130 has been specifically designed with the next generation of offshore components in mind. HLP Engineers have ensured the crane can get closer to the lift than any crane before us, allowing the next generation of lifting to be achievable today. XXL Jackets can be easily handled with component heights over 100m, and a lifting capacity exceeding 3000t at 42m.
