

HLP130 - Turbine Assembly

1,200t
at up to 240m
hook height

HLP enabling
floating wind
on a commercial
scale

HLP130
based on
20mw
turbine
erection

Floating wind opens up 80% of the world's offshore wind recourses, which are located in waters deeper than 50 meters.

Heavy Lift Projects has 20MW turbines in mind. The HLP130 is a next generation crane for the next generation of Offshore Wind. Our engineers have enabled the HLP130 to be able to handle loads of 1200t at heights of up to 240m, safely and efficiently.
